

SYSTEMS AND METHODS FOR VIEWING AN
ABNORMALITY IN DIFFERENT KINDS OF
IMAGES

ABSTRACT OF THE DISCLOSURE

A method for viewing an abnormality in different kinds of images is described. The method includes scanning an object using a first imaging system to obtain at least a first image of the object, determining coordinates of a region of interest (ROI) visible on the first image, wherein the ROI includes the abnormality, and using the coordinates of the ROI to scan the object with a second imaging system.
